

Vendora Authentication Flows

This document explains the login and sign up processes for two audiences. Owner or Admin flow for managing vendors and platform settings.

Vendor or POS user flow for merchants who use Vendora to sell in-store and online.

Owner or Admin Sign up and Login

1. Owner opens admin portal.
2. For sign up the owner submits name work email and password then confirms email via verification link.
3. System creates the Owner account optionally prompts to enable two factor authentication.
4. For login the owner submits email and password. The system applies rate limiting and lockout after several failed attempts.
5. If two factor authentication is enabled the owner enters TOTP or email code.
6. System issues an admin session with HttpOnly Secure SameSite cookie and redirects to the Admin Dashboard.

Vendor or POS User Sign up and Login

1. Vendor opens the application portal.
2. For sign up the vendor enters business name email and password then selects a subscription plan.
3. System redirects to the payment processor for checkout. Card data stays with the processor.
4. On payment success a secure webhook marks the subscription Active and triggers tenant and subdomain provisioning.
5. For login the vendor enters email and password. The system applies rate limiting and lockout after several failed attempts.
6. If two factor authentication is enabled the vendor enters the code.
7. System issues a vendor session with role based access and redirects to the Vendor Dashboard.
